# TERREBONNE PARISH COASTAL ZONE ADVISORY COMMITTEE

#### **MITIGATION PROJECTS**

1/15/03

## Proposed Project Location:

Dularge Pump Station & Canal, F-Caillou Marshes Unit

T19S-R16E, Section 35 T20S-R17E, Sections 16, 19, 36

#### Problem:

Vanishing Marshes

Note: Introduce fresh water into marshes by using Five Mile Fresh Water Canal and forced drainage pump. Canal starts at Falgout Canal Road and ends at end of Bayou Dularge Road. Reduce saltwater intrusion with control structures on Bayou Sauveur (Section 16), Bayou Rambio (Section 19), Bayou Gambee (Section 36), and Bayou Lewis (Section 31).

## System Needs

- 1) Fresh water input into marsh
- Closure or control structures in Caillou marshes to keep saltwater from destroying upper marshes
- 3) Bank stabilization of Bayou Grand Caillou from Bayou Lewis to Houma Navigation Canal
